The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office.

We have several pamphlets available. They include: (1) Statements of Water Division and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

Statement of Water Division and Use must be filed by riparian and pre-1914 appropriative water users as set forth in Water Code section 5100 with specific exceptions. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation. An appropriate right is required for use of water "foreign" to the natural stream system.

There is a surplus not needed by riparian users. Since 1914, new appropriators have been required to obtain a permit and license from the State. An appropriate right is granted by riparian land and for storage of water. Generally, appropriate rights may be exercised only when upstream from their diversions, and (3) asserts the State to determine if additional water is available for future appropriators.

A water user of a stream can be granted by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return flows from groundwater, or other "foreign" water to the natural stream system.

The severance of a stream must be used to store water which originates in a different watershed, water previously stored by others, return flows from groundwater, or other "foreign" water to the natural stream system.

Generally, a riparian user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return flows from groundwater, or other "foreign" water to the natural stream system.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the source of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, or return flows from use of groundwater.

There are two principal types of surface water rights in California. They are riparian and appropriative rights.
